

BLEND CREAM

Replacing synthetic texturizing by a natural bio sourced alternative is now possible !

Designed by Alland & Robert, **Blend Cream** is a blend of acacia and sterculia gums that generates outstanding textures in cosmetics and care products.

TEXTURE PROFILE ANALYSIS : CREAM

1 represents the texture of the cream: a formulation with **Blend Cream** is firmer than that obtained with xanthan or carbomers.

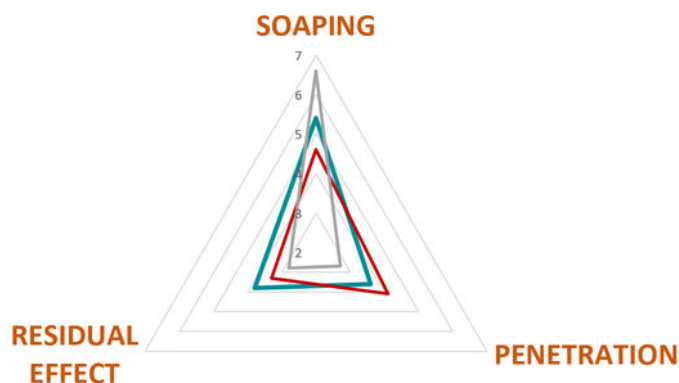

2 represents the cohesion and (positive) adhesiveness of the cream. Formulation based on xanthan is not consistent and does not remain on the skin. Carbomer and **Blend cream** have similar results for this parameter.

— Blend Cream 1% — Carbomer 0.2% — Xanthan Gum 1.5%

SENSORY ANALYSIS

Blend cream makes it possible to formulate skincare with excellent penetration without soaping, and a rich and creamy texture with no sticky or glutinous effect.

The use of **Blend Cream** results in a texture that leave a pleasant and soft residual effect on the skin, a texture similar to that obtained using carbomers.

Multifunctional, natural, vegetal, eco-friendly, **Blend Cream** presents excellent viscosifying, emulsifying and filmforming properties while keeping 100% bright effect without any drawback on the color of the final cosmetic formula.

Blend Cream provides an alternative to polyacrylate gels and vegetable hydrocolloids such as xanthan (already widely used to replace carbomers). It is the ultimate texturizing agent.

DemeCare[®]

VEGETAL GUMS FOR NATURAL COSMETICS

DemeCare[®]

is Alland & Robert's innovative range of natural gums designed for the cosmetics & care industry.

The range is composed of high quality, multifunctional acacia gum and sterculia gum, including patented blends.

All products of the **DemeCare[®]** range are natural, vegetal, biodegradable & received the maximum rating according to the ISO 16128 Standard. They are available organic and COSMOS certified.
